Shaking Intensity

Overall, the population in this region resides in structures that are vulnerable to earthquake shaking, though some resistant structures exist. A magnitude 6.1 earthquake occurred in the Indonesia region 397 km east of the location of this earthquake on August 1, 1989 (UTC), with estimated population exposures of 4,000 at intensity VIII and 9,000 at intensity VII, resulting in an estimated 120 fatalities. On February 17, 1996 (UTC), a magnitude 8.2 earthquake and tsunami occurred near the Baik, Indonesia, region 335 km northeast of the location of this earthquake, with estimated population exposures of 155,000 at intensity VIII and 120,000 at intensity VII, resulting in an estimated 166 fatalities. Recent earthquakes in this area have caused, landslides, fires and liquefaction that may have contributed to losses.

This information was automatically generated and has not been reviewed by a seismologist.
